

Hog Hearth® Heat Mat Indicator (HMI)

The Hog Hearth® HMI (Heat Mat Indicator) is designed to indicate that each heat mat is drawing power and producing even and consistent heat. This saves time and money by eliminating the need to take a laser wand reading or check each mat for heat by hand. Now all heat mat activity is easily viewable from the entrance of each farrowing room.

All Hog Hearth® HMI's are voltage variable from 100 - 260 volts.

The Hog Hearth® HMI's easy installation and liquid tight construction make this state of the art addition to the Hog Hearth® line a must for every install.

All HMI's are hardwired. DO NOT break water tight gasket seal. Opening unit will void warranty.
